

What is this?

- The intention of this page is to show the schedules of the GDC and TDC bots in production and help coordinate manual runs of processes.

Bot Boxes:

- The times listed in each box are the times a process is scheduled to run on that selected bot.
- If a time is in **red** it means that it is currently the hour in which the process is scheduled to run.
- If you click on a box you will see the schedule of each process that runs on that bot as well as a list of processes scheduled for the selected day.
- The text “**Nothing Currently Scheduled**” means that there is no process scheduled during that time on that bot.
- If you select a bot box you will also see a “Bot Utilization” number. This is the capacity of a bot and is intended to help with scheduling of future processes.

Resource Unit: (removed after upgrade to BP 6.x)

- The “RESOURCE UNIT” is a live look at the port of each machine.
 - If a process is running on that machine you will see:

```
RESOURCE UNIT
- RUNNING 4c6f97db-3b3f-49ec-
```

- If a process is not running on that machine you will see:

```
RESOURCE UNIT
Total running: 0
```

*(This is helpful because you can determine if a process has already finished or if someone is running a process manually out of the schedule.)

Selecting Days:

- The current date/time is the default when the page is loaded
- In the top right you can change the date and the schedule will update accordingly.

More Info Panel:

-  Click this icon in the bottom left to pull out the “more info” panel which contains date information.

Other:

- The page will automatically refresh at the beginning of every hour
- If something looks wrong or broken, click this link in the more info panel:
